
LINUX ADMINISTRATOR CV

When writing a Linux Administrator CV, some specific keywords must be included in the resume. Bear in mind that employers do not read every resume word by word. Picture this scenario. There are 100 applicants for this position. Each resume is about 2-3 pages. Do you think the employer will read each resume from cover to cover? The answer is No. Most employers only spot for specific keywords. They will not read your resume verbatim. Look at the sample CV of a Linux Administrator below. Keywords such as Linux scripts, Linux environment, Linux systems, and Linux administration are used.

Wesley Johns

Ap #602-8767 Morbi Road, Oakham, Rutland, H8Z 0TC

Tel: – 01980 848567

[email]

Date of Birth: – 30/12/90

Nationality: – British

OBJECTIVE:

As a Linux Administrator, my objective is to strengthen the company's applications and system features, develop scripts and codes, and configure servers and maintain networks to reinforce the company's technical performance. Part of this objective is to develop tools needed for effective database setup, ensure that Linux environment is performing at its optimum level, manage system backups and provide infrastructure support. To be able to fulfill this, I will utilize the knowledge and expertise I have gained in my over two years experience as Linux Administrator such as Linux scripting, firewalling and IDS software. With this said, I am confident that this objective is possible.

PROFESSIONAL ACCOMPLISHMENTS:

- Highly experienced in developing Linux programs
- Sound knowledge of common scripting languages and configuration management tools
- Extensive knowledge of enterprise backup and restore procedures
- Familiarity with database and cluster management
- Ability to install, support and troubleshoot Linux server
- Ability to oversee formal patch management and security procedures

EMPLOYMENT AND EXPERIENCE:

Linux Administrator Sentinel Group – Hertfordshire Sep 2012 – Till Date

- Performed installation, maintenance and troubleshooting of Linux servers.
- Performed system back-ups and security updates on regular basis.
- Analyzed performance problems and implemented preventive maintenance procedures.
- Assisted in setting-up proactive monitoring tools such as Nagios.
- Performed Linux administration and data migration activities.
- Maintained data center infrastructure including servers and networks.

Linux Administrator Gregory James Group – West Lothian Sep 2011 – Sep 2012

- Configured and maintained multiple Linux systems.
- Assisted in updating existing Linux systems to meet business demands.
- Identified and rectified performance problems.
- Provided first line support for any system issues.
- Managed system storage requirements, access controls and permissions.
- Maintained records of system implementations and audits.
