

When writing a CV of a QA Engineer, it is ideal if you present first the skills that will give the reader an impression that you are competent for the job. The key is specificity in the data you present. Include your skills and experience in establishing and implementing quality management systems, change control, conducting risk analysis, quality data trending, corrective-preventive action, document and drawing control, and various testing methods (TMAP, ISTQB & test tooling) among others. Present all your professional experience in reverse chronological order. In this manner, you are giving the employer a summary of what you can offer to the company. A QA Engineer CV should look like this.

P.O. Box 819, 4457 Vehicula Street, Lochranza, Buteshire, Y21 1WA
Tel: – 01934 076931 [email]
Date of Birth: – 18/10/90 Nationality: – British

As a QA Engineer, my objective is to bring success to the company by implementing effective quality control procedures and collaborate with other teams to install and maintain the most efficient systems. Having been a Quality Assurance Engineer for over two years, I have enhanced my abilities in performing systems and site inspections, actual systems testing, supervising activities of service providers, and resolving issues with quality assurance. One of my objectives is to further my expertise in the field of quality assurance engineering, and I am confident I can do this best if I will be a part of a competent and innovative environment.

- Good experience in performing QA testing
- Sound knowledge of quality management and assurance systems
- Familiarity with automated testing methods and tools
- Ability to write automated test scripts
- Ability to prepare test specifications

QA Engineer	Acunu Ltd – London	Oct 2012 – Present
